

# ADEMOLA OLUWASOLA OPEYEMI

*Full-Stack Developer*

oluwasolaopeyemi93@gmail.com · [www.linkedin.com/in/sola-opeyemi-ademola](https://www.linkedin.com/in/sola-opeyemi-ademola) · [github.com/Doyen04](https://github.com/Doyen04) ·

Lagos, Nigeria

---

## PROFESSIONAL SUMMARY

---

Final-year Software Engineering student at Mountain Top University with hands-on full-stack development experience across a professional internship, two hackathons, and multiple self-directed production projects. Proficient in Next.js, React, TypeScript, and PostgreSQL, with practical exposure to AI API integration (Google Gemini, Anthropic Claude), real-time multi-channel notifications, and payment infrastructure for the Nigerian market. Comfortable leading small engineering teams, scoping technical requirements, and shipping end-to-end features independently.

## TECHNICAL SKILLS

---

**Languages:** TypeScript, JavaScript (ES2022+), HTML5, CSS3, SQL

**Frameworks & UI:** Next.js 15 (App Router), React 18, Tailwind CSS, Konva.js

**Backend & Data:** Node.js, Prisma ORM, Drizzle ORM, PostgreSQL (Neon serverless), REST APIs

**AI & Integrations:** Google Gemini API, Anthropic Claude API, Termii (SMS/WhatsApp), Resend, Sudo Africa

**Infrastructure:** Vercel, Cloudflare R2, Upstash QStash, NextAuth v5, Git & GitHub, GitHub Copilot

## WORK EXPERIENCE

---

### Software Engineering Intern

NSIA Insurance · Lagos, Nigeria *March 2025 – September 2025*

- Contributed to the development and maintenance of internal web-facing software tools using modern JavaScript frameworks.
- Collaborated with senior engineers in an Agile team environment, participating in sprint planning, code reviews, and deployments.
- Debugged and resolved frontend and integration issues, reducing reported bugs in assigned modules.
- Documented technical processes and assisted with testing workflows to improve release reliability.

## HACKATHON EXPERIENCE

---

### Team Lead — Student Result Notification System

Special Topics in Software Engineering Hackathon · Mountain Top University, Nigeria *2026*

**Stack:** Next.js · Node.js · Termii · PostgreSQL

- Led a cross-functional team to design and build a multi-channel result notification platform for university administrators and parents.
- Architected a reliable notification fallback pipeline: WhatsApp → Email → SMS using Termii, accounting for connectivity constraints in the Nigerian context.
- Coordinated task delegation, managed the Git workflow, and delivered a working end-to-end prototype within the hackathon deadline.

### Developer — Inventory Management System

Glitch Hackathon · Nigeria *2026*

**Stack:** React · Node.js · PostgreSQL

- Built a full-stack inventory management system with real-time stock tracking, low-stock alerts, and a reporting dashboard.

- Implemented core CRUD operations and the data persistence layer, contributing key backend features to the team's final submission.

## PROJECTS

---

### Unplug — Subscription Waste Detection App

Personal Project · Final Year Capstone · [github.com/Doyen04/unplug](https://github.com/Doyen04/unplug) 2024 – Present

**Stack:** Next.js 15 · TypeScript · Tailwind CSS · Prisma · Neon · Google Gemini · Sudo Africa

- Engineered a SaaS application that detects and tracks forgotten subscriptions, surfacing wasted monthly spend for users.
- Designed a virtual card issuance system (one Sudo Africa card per subscription) enabling one-click cancellation without merchant involvement.
- Integrated Google Gemini API for AI-powered subscription classification and intelligent spend categorisation.
- Built a gamification mechanic to drive engagement and motivate users to cancel unused subscriptions.

### Result Notification System — University Admin Dashboard

Personal Project · [github.com/Doyen04/result-notification-system](https://github.com/Doyen04/result-notification-system) 2024 – Present

**Stack:** Next.js · Prisma · NextAuth v5 · Termii · Resend · Upstash QStash · Cloudflare R2 · Neon

- Built a full institutional dashboard for university registrars with role-based access control and Senate approval workflows for result publishing.
- Implemented a multi-channel parent notification system with automatic fallback: WhatsApp → Email → SMS via Termii and Resend.
- Designed an async queue architecture with Upstash QStash for reliable bulk notification delivery at institutional scale.

### Catalyst Reactor — Collaborative UI Design Tool

Personal Project · [github.com/Doyen04/catalyst-reactor](https://github.com/Doyen04/catalyst-reactor) 2024

**Stack:** React · TypeScript · Konva.js · Zustand · Tailwind CSS

- Developed a Figma-inspired browser-based design tool with a canvas engine built on Konva.js.
- Implemented shape drawing, selection, drag-and-drop, layering, and real-time state management via Zustand.

### Carrom Pool — Physics-Based Browser Game

Personal Project · [github.com/Doyen04/carrom-pool](https://github.com/Doyen04/carrom-pool) 2024

**Stack:** JavaScript · Matter.js · HTML5 Canvas

- Built a fully playable Carrom Pool game in the browser using Matter.js for 2D rigid-body physics simulation.
- Implemented accurate collision detection, puck friction, striker mechanics, and turn-based game logic in a single-file architecture.

## EDUCATION

---

### B.Sc. Software Engineering

Mountain Top University · Ogun State, Nigeria *Expected 2026*

- Final Year Project: Unplug — a subscription waste detection platform with AI classification and virtual card issuance.
- Relevant coursework: Data Structures & Algorithms, Database Systems, Software Engineering Principles, Web Development.
